SPECIAL

Alberto Meda, *Long Frame Chaise Longue* (1994). Extruded and die-cast aluminum and PVC-coated polyester. Available through Alias.

"Alberto Meda's technical approach to comfort comes from his background as an engineer. As a result, relaxing poolside on one of these would be like getting a suntan on a suspension bridge: a pair of steel tension cables brace an assembly of aluminum extrusions and castings to support the textile mesh. As with many chairs featuring a textile sling stretched between two lengthwise members, the Alias-produced *Long Frame Chaise Longue* is an evolution of the Eames Aluminum Group."

Maarten van Severen, *Leather Lounge Chair 04* (2004). Leather, stainless steel. Available through DePadova.

"Maarten van Severen had a way of setting formal precedents using ordinary materials. This upright chaise features a single, asymmetric armrest cum side table. The table and the chair surface are constructed the same way — thick, vegetable-tanned belt leather screwed onto a stainless steel outline — reminding us that the table is really more of a mutant armrest that can support a book or magazine, precisely the sort of thing one might be holding in a chair like this."

Leon Ransmeier is a New York-based designer and founder of Ransmeier Inc. His clients include Herman Miller, Hay, Maharam, and Mattiazzi.
